For information when upgrading to Appway 11 from Appway 10.x, see the 'System Upgrade: 10.x to 11.x' article:
https://community.appway.com/screen/kb/article/system-upgrade-10-x-to-11-x-2140770481340

For new Appway 11 installations, see:
- System Installation guide: https://community.appway.com/screen/kb/article/system-installation-appway-11-2169641374132
- System Installation Using Containers guide:
https://community.appway.com/screen/kb/article/system-installation-using-containers-appway-11-2170238244928

For information on deprecated and removed features in Appway 11, see:
https://community.appway.com/screen/kb/article/feature-removal-and-deprecation-with-appway-11-2107886397762

For Appway 11 Known Issues, see: https://community.appway.com/screen/kb/article/appway-11-known-issues-2199176263340

For information on the Appway product lifecycle, see:
https://community.appway.com/screen/kb/article/appway-releases-product-lifecycle-and-end-of-support-1753664569425
```

Appway Platform (Core)

Change

Area	Importance	Description
3rd Party Library	Low	The following third-party libraries were upgraded in Appway 11.1.4: - Jackson Core, Jackson Annotations, and Jackson Module JAXB Annotations from version 2.12.3 to 2.12.6 - Jackson Databind from version 2.12.3 to 2.12.6.1 Changes in third-party libraries are also listed in our System Upgrade documentation: https://community.appway.com/screen/kb/article/2140770481340
Studio - Discussion	Medium	The Discussion feature in Appway Studio can now be made read-only by setting the 'nm.studio.discussion.enabled' property to 'false' (default is 'true'). This implies that user messages are disabled, while automatic activity logs are still kept. In this case, the 'Discussion' tab ('Solution Design' module) is renamed 'Activity Log'. See documentation: https://community.appway.com/screen/kb/article/1497400061606#25-discussion--activity-log

Bugfix

Area	Importance	Description
Compare Package Version	Low	Fixed an issue where the 'Type' column of the 'Compare Package Versions' submodule ('Solution Design' > 'Maintenance') was empty even if filters were added.
Export Packages	Low	In the 'Export Packages' wizard, fixed an issue that was causing a Package version to appear as non-modified even if it was modified. This affected only modifications of Package Properties (Description, Entry Points, and so on).
Import	Low	In case of an import failure due to a corrupted .AWDEPLOYMENT file, an unnecessary NullPointerException was raised and logged in Appway Studio 'Activity Log'. This exception is no longer raised.
Process Editor	Medium	Business Rules: Fixed an issue that prevented the assignment of the result of the evaluation of a Rule invoked using an Evaluate Rule Task in the Process Editor. This happened when the binding specified in the 'Actions Binding' field of the Task was not a simple variable expression such as $actions or $values.

Script Language	Low	Fixed an issue where the validation of Scripts using the METHODCALL Script Function failed due to a ClassCastException.

Appway Extensions

Bugfix

Area	Importance	Description
Extension	Medium	Component Extension 11.1.4: Dropdown List/Multiple Selection Field: Fixed an issue affecting 'Dropdown List' and 'Multiple Selection Field' Screen Components when a 'Catalog' Data Source was replaced by a different Catalog. In this scenario, lazy loading was not working properly, thus preventing results from being displayed while scrolling through the entries.
Extension	Medium	Functions Extension 7.1.2: - Bugfix: Introduced a fix where .getId() method calls are no longer migrated on primitive types if an underlying Java class contains a .getId() method, and on Data Classes that have a .getId() method implemented. Therefore, only .getId() method calls on the DataEntity class are now migrated. - Feature: The new Script Function 'Pdf:RemovePages' has been introduced to allow removing pages from a PDF file. See documentation: https://community.appway.com/screen/kb/article/1641896132117
