Remarks
```
Release notes with changes since version 6.3.16.

Upgrade notes:
No special actions are required when upgrading from Appway 6.3.16 to 6.3.17.
```

Appway Platform (Core)

Feature

Area	Importance	Description
System Health	Low	Integration Link: The new Integration Link Consistency sensor is triggered when it registers an inconsistency of Integration Link states across cluster nodes, e.g. when an Integration Link fails on one node of the cluster. This means that you do not need to connect to each node individually to keep track of the correct functionality of all Integration Links.

Bugfix

Area	Importance	Description
Cluster Storage	Low	A warning is now logged if temporary files in the cluster directory cannot be moved, but have to be copied instead. This warning indicates that a - potentially expensive - copy operation has to be performed in addition to writing the data to disk.

Appway Extensions

Bugfix

Area	Importance	Description
Extension	Low	Component Extension 6.3.19: Adaptive Flow Layout ---------- - Bugfix: Full Width Elements now behave in the same way as in Appway 6.2. This means that an Info Box in a full width element is not resized or re-positioned in any way. - Bugfix: Full Width Elements now adapt in width so that they align correctly with other elements. Date Picker ---------- - Bugfix: Removed the minimum-width constraint when the Date Picker component is placed in an Info Box. Doing so allows the component to shrink and behave like other form fields, including cases where the popup is opened and displayed. Dropdown List ---------- - Bugfix: It is now possible to reset the selection using the Clear icon ('x') when the Dropdown List is expanded. - Bugfix: The focus is no longer set on a Dropdown List in the following situation: A user selects a value from a Dropdown List, switches to a different browser tab, and then returns to the original page. - Bugfix: The Clear icon ('x') for the Dropdown List is now displayed correctly even when the CONTEXT_PATH differs from '/'. - Bugfix: Removed the minimum-width constraint when the Dropdown List component is placed in an Info Box. Doing so allows the component to shrink and behave like other form fields, including cases where the popup is opened and displayed.
Extension	Low	Web Services Extension 2.3.34: - Bugfix: The RESTClient no longer throws an exception when the returned HTTP status code is 304 or another code in the 2xx and 3xx ranges. In all other cases, the RESTClient

		throws an exception as expected. - Bugfix: Fixed an issue which caused an infinite loop when XSDs imported using the XSDToDataClass function had backward references to already imported XSDs.
