Release Notes 7.0.3 - Patch Release | 09.08.2017

Remarks

```
This document contains the Release Notes with changes since version 7.0.2

Upgrade notes:
No special actions are required when upgrading from Appway 7.0.2 to 7.0.3.

For details on upgrading to Appway 7, see the article: 'System Upgrade: 6.3 to 7.0' at:
https://community.appway.com/screen/kb/article/system-upgrade-6-3-to-7-0

For documentation of new and existing features, see the Appway Knowledge Base at:
https://community.appway.com/screen/kb

For information on Known Issues in Appway 7, see:
https://community.appway.com/screen/kb/article/appway-7-known-issues

For information on deprecated and removed features in Appway 7, see:
https://community.appway.com/screen/support/news/feature-removal-and-deprecation-planned-with-
appway-7-0
```

Appway Platform (Core)

Bugfix

Area	Importance	Description
Business Object	Low	Fixed the following issue: The 'Review Dependencies' step of the 'Move Business Object' wizard did not show a dependency from the Source Package to the Target Package if the Business Object being moved was in a Custom List in the Source Package.
Case Management	Low	Correctness rules are now listed alphabetically.
Custom Lists	Low	Fixed the following issue: when a Custom List was selected in the filter field, and the 'Prevent moving of Business Objects which may affect running processes' checkbox was deselected, then the list of Business Objects that could be moved was not filtered based on the content of the Custom List.
Entry Points	Low	Entry Point links inside Packages and in the Properties editor are now actual HTML links.
Integration Links	Low	Fixed an issue where validation did not work correctly for integer values inside Integration Links.
RSS Feed	Low	Fixed an issue in Studio where URLs for Feeds included the host name in the path.
Screen Components	Low	Fixed the following issue: When a Data Source for a Screen Component was set to 'Expression', then the 'Variable Type' property showed a list of all the Packages.
Screens	Low	Fixed an issue where it was not possible to delete actions on the Screen Editor when using Internet Explorer 11.
Screens	Low	Fixed the following issue: When you created a Screen Business Object, you associated its View Component with a Style Business Object and exported it to another solution, then the imported Screen Component used Legacy Styles instead of the associated Style Business Object.
Value Store Splitting	Medium	Fixed the following issue: If Value Store Splitting was enabled and Process variables were stored outside the Value Store, the application cache or user preferences might be corrupted. To avoid data corruption, such Value Stores are not split.

Appway Extensions

Bugfix

Area	Importance	Description
Extension	Low	Component Extension 7.0.2 Phase Chevron Component: - (Bugfix) The Phase Chevron disappeared when clicked after the browser switched from mobile to desktop version. - (Bugfix) A Phase Chevron with an empty Phase name displayed this text: 'Undefined'. - (Bugfix) The Phase Chevron displayed layout issues when the Phase name was an empty string.

Extension	Low	WebServices Extension 2.5.0 (for Appway 7.0.2 and higher): - Bugfix: The TranslateFrom function now convert null to 0 (for XML). - Bugfix: The TranslateTo function now adds double quotes to Boolean values. WebServices Extension 2.4.6 (for Appway 7.0.x): - Bugfix: The TranslateFrom function now convert null to 0 (for XML). - Bugfix: The TranslateTo function now adds double quotes to Boolean values.
