Release Notes 6.3.18 - Patch Release | 14.12.2016

Remarks

```
Release notes with changes since version 6.3.17.

Upgrade notes:
No special actions are required when upgrading from Appway 6.3.17 to 6.3.18.
```

Appway Platform (Core)

Feature

Area	Importance	Description
System Health	Low	The Map Persistence health sensor can now be employed in a clustered environment. This health sensor verifies the status of each distributed map for which the persistence option is enabled, allowing you to easily identify potential issues. If entries added to distributed maps cannot be written to the cluster storage, the sensor is triggered.

Bugfix

Area	Importance	Description
Process Instances	Medium	Fixed a regression bug in the ‘Force Unlock Process Instances’ thread. This fix avoids a potential race condition due to which Hazelcast locks were no longer released correctly. This issue occurred in Appway versions 6.3.14 - 6.3.17. If you are running one of these versions and experiencing this issue, contact Appway Support for details on resolving the problem.

Appway Extensions

Change

Area	Importance	Description
Extension	Low	Cassandra Hazelcast Store Extension 11.0.3: Change: Internal refactoring for better performance. If you use the identity provider functionality, be aware of the following changes: - ‘identity-provider-xy.jar’ was renamed to ‘IdentityProvider-x.y.jar’. - The signature of the method in the "IdentityProvider" interface which has to be implemented by developers has changed from ‘public CassandraIdentity getIdentity()’ to ‘public Identity getIdentity()’. - 'CassandraIdentity' was renamed to 'UsernamePasswordIdentity'. See chapter 4.1.2.1 of “System Installation (Appway 6)” on developer.appway.com for full details.

Bugfix

Area	Importance	Description
Extension	Low	Component Extension 6.3.20: - Bugfix: Dropdown List: Long values are now truncated correctly so that they do not overlap with the Clear icon ('x') or the icon that expands the Dropdown list.
