```

Appway Platform (Core)

Feature

Area	Importance	Description
Value Store Splitting	Medium	Implemented more detailed HTTP Tracing and improved performance during Value Store commit if Value Store Splitting is disabled.

Bugfix

Area	Importance	Description
Configuration	Low	Fixed an internal server error occurring during configuration reload when the file $DATA_HOME/conf/conf.properties did not exist.
Data Tables	Low	Fixed an issue affecting timestamp columns in FNZ Studio Composition data tables where values were not sorted correctly (e.g., the "Last login" column did not always show the latest login times first).
Security	Low	ClassPathServlet: If the servlet is invoked with a URL path containing an extension name (for example "/resource/classpath/WebServices/..."), the servlet restricts the search for extension classpath resources to the contents of that extension JAR file.
Web API	High	The Web API Business Object now supports the deserialization of Dates formatted with/without time, and with/without timezone offset. See documentation: https://community.appway.com/screen/kb/article/web-api-business-object-1694997313963#143-web-api-requests-date-formatting

Appway Extensions

Feature

Area	Importance	Description
Extension	Medium	AWSHazelcastStore Extension 3.3.0:

		- Delete operations are now slightly slowed down automatically (in average around 2 seconds) to avoid hitting the AWS S3 throughput limits. - The new configuration property 'com.nm.extensions.awshazelcaststore.serviceUrl' allows using a custom S3 compliant server. This enables the adoption of other S3 technologies such as MinIO. See documentation: https://community.appway.com/screen/kb/article/awshazelcaststore-extension-cluster-storage-2170154538964
Extension	Medium	WebServices Extension 4.1.4: - Feature: Added extension configuration 'webservices.multipart.post.mode'. See documentation: https://community.appway.com/screen/kb/article/webservices-extension-1482807618060#23-extension-configuration - Bugfix: The classpath.policy to restrict allowed resources is now fixed.

Change

Area	Importance	Description
Extension	Low	StatisticsCollector Extension 9.0.1: Statistics values that are not calculated are saved as zero values in .CSV files and shown as empty strings (i.e. empty cells) in statistics tables in FNZ Studio Composition ('System Maintenance' > 'System Statistics'). See documentation: https://community.appway.com/screen/kb/article/statisticscollector-extension-1696907405798
