Appway Platform 2022 renaming: https://community.appway.com/screen/support/news/2022-appway-
platform-releases-renaming-announcement-2282031383370
```

Appway Platform (Core)

Feature

Area	Importance	Description
Advanced Studio Permissions	High	The new 'Permission Cap' feature allows globally setting the highest level of access available (Full Access, Read-Only Access, No Access) for each Permission in an environment. This may be useful to limit the possibility to perform certain operations in specific environments (e.g. preventing users from uploading extensions in a Cloud installation). Note that this feature has been developed mainly for FNZ Studio internal use. See details in documentation: https://community.appway.com/screen/kb/article/1695975642783

Bugfix

Area	Importance	Description
Ad-Hoc Sub-Processes	Medium	Fixed an issue occurring in Ad-Hoc Navigation where the token did not fall back on the 'First Enabled Task' use case if the target task was undefined (e.g., it is the first visit), or the task was not enabled. This fixes Known Issue KI-20222-5. See documentation: https://community.appway.com/screen/kb/article/2321580857846
Ad-Hoc Sub-Processes	Medium	Fixed an issue that caused a Process to be suspended when following a connection going to the 'Last Visited Task' on an Ad-Hoc Sub-Process. This happened only for Processes included within a Sub-Process Task. Upgrade note: If upgrading from FNZ Studio 2022.2.1, please note the the existing 'Last Visited Task' use cases stored on Process instance will not be maintained, and the behavior will fall back on 'First Enabled Task'. See documentation: https://community.appway.com/screen/kb/article/2317711876877
Advanced Studio Permissions	Low	Fixed an issue that allowed removing the 'Workspace' Permission from Role 'User'. See documentation: https://community.appway.com/screen/kb/article/1695975642783

Business Objects	Medium	Fixed an issue where Users could edit Business Objects retrieved through Global Search even if they were not assigned the correspondent Role.
Compare Versions	Low	Fixed an issue where some diffs between Business Objects were not detected by the 'Compare Versions' tool.
Extension Configuration	Medium	Fixed an issue where extension configurations were not updated correctly and a warning message ('The configuration has changed. Please restart the Extension') was shown in FNZ Studio Composition ('System Configuration' > 'Extensions') . This fixes Known Issue KI-20222-6. See documentation: https://community.appway.com/screen/kb/article/2321580857846
Package Import/Export	Medium	Fixed an issue where imported Packages that already existed as read-only items in the target environment were not shown. In this situation, Packages could not be imported. The Import wizard now correctly shows such Packages.

Appway Extensions

Feature

Area	Importance	Description
Extension	Medium	Functions Extension 9.0.3: The following PDF-related Script Functions have been introduced: - 'Pdf:Decrypt' allows decrypting a PDF file encrypted with a Permission Password (Owner Password) and/or a Document Open Password (User Password). - 'Pdf:Join' allows joining multiple PDF files. Note: This function can be used as a replacement of 'Pdf:Merge', as it supports PDF files encrypted with a Permission Password, as well as more recent PDF versions. - 'Pdf:HasDocumentOpenPassword' allows checking if a PDF file is encrypted with a Document Open Password (User Password). - 'Pdf:HasPermissionsPassword' allows checking if a PDF is encrypted with a Permission Password (Owner Password) - 'Pdf:ResetPermissions' allows resetting permissions on a PDF file encrypted with a Permission Password (Owner Password) See full PDF function descriptions in our documentation: https://community.appway.com/screen/kb/article/1641896132117
