Release Notes 7.2.8 — Appway Component Extension
Patch Release | 30.05.2018

Changes since version 7.2.7 of the Component Extension.

Multiple Selection Field

- Change: The placeholder text is now visible even when the Multiple Selection Field Screen Component is disabled.

Multiple Selection Field and Dropdown List

- Bugfix: Fixed an issue in the Dropdown List and Multiple Selection Field Screen Components, which were displayed as enabled even when the Data Source was empty or not set. This behavior was inconsistent with Appway 6.3 versions.

Adaptive Flow Layout

- Bugfix: Fixed an issue caused by an incorrect Adaptive Flow Layout tree which prevented Adaptive Flow Layout Groups from inheriting layout properties when they were children of a non-Adaptive Flow Layout Element.

Adaptive List

- Bugfix: Fixed an issue where the elements contained in an Adaptive List Screen Component were misaligned.

Adaptive Table Of Contents

- Bugfix: Fixed an issue where the Adaptive Table Of Contents Screen Component, configured to take entries from an Adaptive Flow Layout, worked incorrectly with Adaptive Flow Layout Groups with Legacy Styles applied.
