Release Notes 6.3.26 - Patch Release | 15.11.2017

Remarks
```
Release notes with changes since version 6.3.25.

Upgrade notes:
No special actions are required when upgrading from Appway 6.3.25 to 6.3.26.
```

Appway Platform (Core)

Bugfix

Area	Importance	Description
Custom Lists	Low	Fixed an issue where adding a high number of Business Objects to a Custom List was very slow and memory-consuming.
Integration Link	Low	Fixed an issue where the Integration Link Redelivery Delay option did not work.
Script Functions	Low	Fixed an issue where the 'Compare Versions' option for Script Functions did not warn about differences in the content between Script Functions.
Security	Low	Fixed an issue where the StorePasswordTask performed a check on the length of the password to be stored, despite not being a crypto key.
System Start-up	Low	Fixed an issue where a race condition was causing a NullPointerException in the AccessControlHandler during system startup.
Workspace	Low	Fixed an issue with permissions which caused Ajax Update Areas to fail when a solution was accessed directly via a URL by a user who has the Administrator role assigned.

Appway Extensions

Feature

Area	Importance	Description
Extension	Low	WebServices Extension 2.3.45: - Bugfix: Fixed the I/O statistics available for Web Services. WebServices Extension 2.3.44: - Feature: TranslateFrom Function: Added a conversion pattern to control the deserialization of entities when the JSON does not contain a node describing the entity. The conversion pattern is Boolean (true or false) and its name is 'DataEntity'. By default, the conversion pattern is false, meaning that it retains the same behavior as in previous versions. If set to true, a null value is assigned instead of creating not null entities with empty values. - Bugfix: REST Clients List: Fixed an issue which prevented listing REST clients. WebServices Extension 2.3.43: - Feature: Added the possibility to configure the HTTP Method Executor class from the RAW Rest Client Integration Link component. - Bugfix: The 'unknown dependency' warning for the SOAPClientComponent Integration Link is not shown anymore when the 'Error Handler' property uses the $exception variable. - Bugfix: SOAP Clients List: Fixed an issue due to which Data Classes extending from imported SOAP clients were listed as SOAP clients.

Change

Area	Importance	Description
Extension	Low	Component Extension 6.3.25: - Change: DropdownList: Added a default label (LABEL:aw.DropdownList.textIfDisabled.noSelection) which is used as placeholder for the Dropdown List when no option was selected and it is in read-only mode (read-only mode means the Dropdown List is disabled and ‘Show as text if disabled’ is selected). By default, this label is an empty string.

Bugfix

Area	Importance	Description
Extension	Low	ClusterTools Extension 3.1.8: - Bugfix: Invalid values are now skipped when calculating lock ages in the HazelcastLocksInfo TotalAgeMsLocks JMX bean.
Extension	Low	DataStore Extension 3.2.4: - Bugfix: Fixed a 'connection closed' error which occurred when calling the SelectDataEntityIds function.
Extension	Low	HazelcastForceUnlock Extension 0.3.5: - Bugfix: Fixed an issue where jobs were unregistered when the node was stopping.
