```

Appway Platform (Core)

Bugfix

Area	Importance	Description
Business Object Dependencies	High	Fixed an issue where several validation errors about missing Package Dependencies were returned. Note that this behavior was caused by a change introduced in FNZ Studio 2024 LTS Patch 1 (and FNZ Studio 2024.4.1) to improve the "Used By" section of a Data Class by listing usages of Data Class properties and methods. This change has now been reverted.
Validation	Medium	Fixed an issue where an unexpected exception was logged when running validation on a script code using a non-existent method on a Java class (e.g., "BigDecimal.helloWorld(0)").

Appway Extensions

Bugfix

Area	Importance	Description
Extension	Low	ProcessMigration Extension 9.0.1: Fixed a NullPointerException that occurred when trying to add a Process Token Filter of type "Token Element Type".
