Remarks

```
Release notes with changes since version 7.1.2.

No special actions are required when upgrading from Appway 7.1.2 to 7.1.3.

Upgrade notes when upgrading from 7.0.x:
- If your Appway installation uses a Relational database or Cassandra as a cluster storage
backend, you need to create the 'piindexdefinitions', 'piindexstatuses', 'piindexdata', and
'piindexdatasizes' tables manually. See the 'Cluster Storage Update' section in 'System
Upgrade: 6.3 to 7.x' for details: https://community.appway.com/screen/kb/article/system-
upgrade-6-3-to-7-0#22-cluster-storage-update
- To provide better guidance and avoid inadvertent styling specification errors, the
possibility to use 'not set' as a value for style references inside 'Style' Business Objects
was removed. In the unlikely situation that 'not set' was used to define a style reference,
validation returns an error in Appway 7.1. Fix the issue by specifying a 'Style' Business
Object for the affected style reference(s).

For details on upgrading to Appway 7.1 from Appway 6.3, see the article: 'System Upgrade: 6.3
to 7.x' at:
https://community.appway.com/screen/kb/article/system-upgrade-6-3-to-7-0

For documentation of new and existing features, see the Appway Knowledge Base at:
https://community.appway.com/screen/kb

For information on Known Issues in Appway 7, see:
https://community.appway.com/screen/kb/article/appway-7-known-issues

For information on deprecated and removed features in Appway 7 and 7.1, see:
https://community.appway.com/screen/support/news/feature-removal-and-deprecation-planned-with-
appway-7-0

-and-8-0
```

Appway Platform (Core)

Change

Area	Importance	Description
Style Business Object	Low	Added a validation error if a style reference in a 'Style' Business Object is set to 'not set' and the Style is not inheriting.

Bugfix

Area	Importance	Description
Button	Medium	Fixed an issue where the text in buttons was not centered correctly in Internet Explorer 11.
Screen Rendering	Medium	Improved the performance of Screen rendering in Internet Explorer 11.

Appway Extensions

Feature

Area	Importance	Description
Extension	Low	CustomSensors Extension 0.5.0: - Feature: Added the Configurable CPU Load sensor, a configurable version of the 'CpuLoadSensor' defined in the core. - Feature: Added the Configurable Java Memory sensor, a configurable version of the 'Java Memory Sensor' defined in the core. - Feature: Added the Custom Script sensor which allows running a custom script. - Change: Changed the output messages of the Value Store Size sensor to include the Process name and size of the Value Store.
Extension	Low	NativeAppServices Extension 3.0.3: - Feature: The extension now supports iOS 10+ notifications. It sends 'notification body'

		and 'notification url' (to be used for deep linking) to the Apple Push Notification server, in addition to 'notification title' and 'id' which were already being sent by previous versions of the extension.

Bugfix

Area	Importance	Description
Extension	Low	Component Extension 7.1.4: Form Channel ---------- - Bugfix: The Form Channel no longer displays "null" in text fields that have a data binding that is null. Component Extension 7.1.3: 'Notification Popup' Screen Component ---------- - Bugfix: Fixed an issue where blank pages were displayed. This occurred when accessing Screens using the Notification Popup if there was no user session. 'Popup' Virtual Component ---------- - Bugfix: Fixed display issues which occurred when zooming and scrolling on mobile devices.
Extension	Low	DataAuditTrail Extension 3.3.2: - Bugfix: Fixed the translation of the values of Indexed and Named collections when backed by a Catalog.
