Remarks

```
Release notes with changes since version 7.2.6.

Upgrade notes when upgrading from 7.1.x:
- With Appway 7.2, behavior has changed if you call 'setValue(...)' on a DataValue which has
been added to a Named or Indexed Collection. See the 'DataValue Changes' section in 'System
Upgrade: 6.3 to 7.x' for details on how to check if your solution is affected by this change:
https://community.appway.com/screen/kb/article/system-upgrade-6-3-to-7-0#17-datavalue-changes
- From Appway 7.2, IMap.flush() should no longer be used in solutions. See the 'Usage of
IMap.flush()' section in 'System Upgrade: 6.3 to 7.x' for more details:
https://community.appway.com/screen/kb/article/system-upgrade-6-3-to-7-0#18-usage-of-imapflush
- If your Appway installation uses a Relational database or Cassandra as a cluster storage
backend, you need to create the 'cryptopasswords' table. You can create this table manually or
use the automated approach available from Appway 7.2 if using a Relational database. See the
'Cluster Storage Update' section in 'System Upgrade: 6.3 to 7.x' for details:
https://community.appway.com/screen/kb/article/system-upgrade-6-3-to-7-0#22-cluster-storage-
update

Additional upgrade notes when upgrading from 7.0.x:
- If your Appway installation uses a Relational database or Cassandra as a cluster storage
backend, you need to create the 'piindexdefinitions', 'piindexstatuses', 'piindexdata', and
'piindexdatasizes' tables. You can create these tables manually or use the automated approach
available from Appway 7.2 if using a Relational database. See the 'Cluster Storage Update'
section in 'System Upgrade: 6.3 to 7.x' for details:
https://community.appway.com/screen/kb/article/system-upgrade-6-3-to-7-0#22-cluster-storage-
update
- To provide better guidance and avoid inadvertent styling specification errors, the
possibility to use 'not set' as a value for style references inside 'Style' Business Objects
was removed. In the unlikely situation that 'not set' was used to define a style reference,
validation returns an error in Appway 7.1. Fix the issue by specifying a 'Style' Business
Object for the affected style reference(s).

For details on upgrading to Appway 7.2 from Appway 6.3, see the article: 'System Upgrade: 6.3
to 7.x' at:
https://community.appway.com/screen/kb/article/system-upgrade-6-3-to-7-0

For documentation of new and existing features, see the Appway Knowledge Base at:
https://community.appway.com/screen/kb

For a list of documentation created for Appway 7.2, see here:
https://community.appway.com/screen/support/news/what-s-new-in-the-knowledge-base#whats-new-
december-2017

For information on Known Issues in Appway 7.2, see:

-and-8-0
```

Appway Platform (Core)

Bugfix

Area	Importance	Description
Data Table	Low	Fixed an issue that prevented the tooltip text defined on a Data Content Screen Component to appear correctly for some icons.
Screen Rendering	Low	Improved performance of Screen rendering on IE11.
Script Editor	Low	When validating, the Script Editor no longer deletes all content following an unclosed comment (starting with /*).
Script Language	Low	Fixed an issue where a breakpoint from an inherited Static Function was not being triggered.

Workspace	Low	Fixed issues which occurred only on IE11 when a Workspace Form Screen Component was placed in a Screen used by a Process.

Appway Extensions

Feature

Area	Importance	Description
Extension	Medium	SystemHealthSensors Extension 1.0.0: - Feature: The new System Health Sensors extension contains the Business Object Repository health sensor. This sensor warns the user when there are Business Objects with too many versions, which could endanger system stability. For documentation, see: https://community.appway.com/screen/kb/article/system-administration-system-health#634-business-object-repository

Bugfix

Area	Importance	Description
Extension	Low	Component Extension 7.2.7: - Bugfix: AdaptiveTab: The Adaptive Tab Screen Component is now correctly switching to the mobile mode when a label does not fit its tab.
Extension	Low	WebServices Extension 2.7.10: - Bugfix: Fixed an issue where moving a SOAP service from one Package to the other returned an error. - Bugfix: Fixed an issue where an Error was always shown in the log even when the Web Service call was successful.
Extension	Low	WebServices Extension 2.7.11: - Bugfix: Fixed an issue where the TranslateFrom Script threw a SAXParseException if the Data Class was implemented in a Package.
