Remarks

```
Release notes with changes since version 10.1.8.

For upgrade information when upgrading to Appway 10.x from Appway 9.1.x, see the 'System
Upgrade: 9.1 to 10.x' article:
https://community.appway.com/screen/kb/article/system-upgrade-9-1-to-10-x-1913013030042

For new Appway 10 installations, see:
- System Installation guide: https://community.appway.com/screen/kb/article/system-
installation-appway-10-1901075430266
- System Installation Using Containers guide:
https://community.appway.com/screen/kb/article/system-installation-using-containers-appway-10-
1951018786136

For documentation of new and existing features, see the Appway Knowledge Base at:
https://community.appway.com/screen/kb

For information on deprecated and removed features in Appway 10, see:
https://community.appway.com/screen/kb/article/feature-removal-and-deprecation-with-appway-10-
1869373509251

For information on Known Issues, see:
https://community.appway.com/screen/kb/article/appway-10-known-issues-1879068360031

For information on the Appway product lifecycle, see:
https://community.appway.com/screen/kb/article/appway-releases-product-lifecycle-and-end-of-
support-1753664569425
```

Appway Platform (Core)

Change

Area	Importance	Description
Package Import/Export	High	In the Package Export procedure, if any Configuration Business Object (namely, Package Configuration, Overriding Translations, Business Data Storage Configuration, or Data History Configuration) has been modified after the Package version being exported was created, you must create a new Package version to include such changes. Now, when you click on the 'Select Package Configuration' checkbox during the export procedure, the following tooltip is displayed to warn you about this behavior: 'The following Configuration Business Objects: [list of changed Configuration Business Objects] have been modified after the Package version was created. To include their changes into the export, create a new Package version'. See documentation: https://community.appway.com/screen/kb/article/packages-1496136140789#61-exporting-packages
Package Versioning	Medium	When a Package is unchanged, but any of its Configuration Business Object (namely, Package Configuration, Overriding Translations, Business Data Storage Configuration, or Data History Configuration) has been modified, you should create a new Package version to include such changes. To support you, the following guidance is now provided in the 'Package Versions' module ('Solution Design' > 'Maintenance'): - Unsealed Packages: A banner suggests creating a new Package version and, when clicking 'Create Version', the system suggests a version number appended with'-conf' (e.g. 0.0.1-conf). You can change this version number. - Read-only Packages: A banner suggests creating a new Package version and, when clicking 'Create Version', the system creates a version number appended with'-conf' (e.g. 0.0.1-conf). You cannot change this version number.

Bugfix

Area	Importance	Description
Data Class Behavior	Medium	Fixed an issue in Data Class Behaviors that allowed selecting Collections of Strings (Indexed String, Named String) as a 'Value' ('Labeled Values' tab) .
Package Import/Export	High	When exporting a Package after changing any Package properties ('Properties' tab), only the 'Package (modified)' version was displayed on the 'Select version' dropdown, thus

		preventing the selection of the Package 'Latest' version. This fixes Known Issue KI-101-27: https://community.appway.com/screen/kb/article/appway-10-known-issues-1879068360031#fixed-issues-in-appway-1019

Appway Extensions

Feature

Area	Importance	Description
Extension	Low	LdapSyncAdapter Extension 7.0.3: The new configuration property 'sync.disableUsers' can be used to configure the sync job to disable users in Appway instead of deleting them when the user no longer exists in LDAP. Users keep their data (such as name and preferences), but they are removed from all Appway Roles and Groups. See documentation: https://community.appway.com/screen/kb/article/authentication-and-authorization-1482804202440#8232-synchronization

Bugfix

Area	Importance	Description
Extension	Low	Component Extension 10.1.9: - Adaptive Flow Layout: 'Adaptive Flow Layout' Screen Components containing a 'Validation Group' now correctly occupy the whole space on the screen.
Extension	Low	RelationalDbBlobStorage Extension 1.0.1: Fixed an issue which did not allow specifying the Postgres schema using the `com.nm.extensions.relationaldbblobstorage.schema` configuration property.
