Remarks

```
Release notes with changes since version 7.1.

No special actions are required when upgrading from Appway 7.1 to 7.1.1.

Upgrade notes when upgrading from 7.0.x:
- If your Appway installation uses a Relational database or Cassandra as a cluster storage
backend, you need to create the 'piindexdefinitions', 'piindexstatuses', 'piindexdata', and
'piindexdatasizes' tables manually. See the 'Cluster Storage Update' section in 'System
Upgrade: 6.3 to 7.x' for details: https://community.appway.com/screen/kb/article/system-
upgrade-6-3-to-7-0#22-cluster-storage-update
- To provide better guidance and avoid inadvertent styling specification errors, the
possibility to use 'not set' as a value for style references inside 'Style' Business Objects
was removed. In the unlikely situation that 'not set' was used to define a style reference,
validation returns an error in Appway 7.1. Fix the issue by specifying a 'Style' Business
Object for the affected style reference(s).

For details on upgrading to Appway 7.1 from Appway 6.3, see the article: 'System Upgrade: 6.3
to 7.x' at:
https://community.appway.com/screen/kb/article/system-upgrade-6-3-to-7-0

For documentation of new and existing features, see the Appway Knowledge Base at:
https://community.appway.com/screen/kb

For information on Known Issues in Appway 7, see:

-and-8-0
```

Appway Platform (Core)

Change

Area	Importance	Description
Integration Links	Low	Process Messages added to the Queue after the Integration Links were stopped are now processed once the Integration Link is restarted.

Bugfix

Area	Importance	Description
Case Management	Low	Fixed an issue where long 'Invalid Variable Assignment' names overlapped with the 'Remove' button.
Integration Links	Low	Multiple consumers on target Integration Links were causing a 'Variable not found' issue for the following components: 'Notify Integration Link', 'Message Router', and 'Message Multicaster'.
Script Functions	Low	Fixed an issue where the 'Compare Versions' option for Script Functions did not warn about differences in the content between Script Functions.
Script Language	Low	Fixed and issue where a dependency on the Java constructor created by the 'NewObject' Script Function was unresolved.
Studio	Low	Fixed an issue where only one Entry Point was displayed if the IDs of two Entry Points differed only by upper/lower case.
Studio	Low	Fixed an issue where only one Package was displayed if the IDs of two Packages differed only by upper/lower case.
Studio	Low	Fixed an issue where the Library only displayed one Business Object if the IDs of two Business Objects differed only by upper/lower case.
System Installation	Medium	Fixed this issue: When the system was empty and the RelationalDbHazelcastStore Extension was used, the system could not be started successfully.

Appway Extensions

Feature

Area	Importance	Description
Extension	Medium	Inbox Extension 1.3.2: - Feature: The WorkItemMyCasesFilter has been added to support filtering of Case tasks where the current user is a participant. - Feature: The configuration property 'case.tasks.filtering.enabled' has been added to support filtering out tasks related to Case Management from advanced filters of the types 'Participants' and 'Current Assignee'.

Bugfix

Area	Importance	Description
Extension	Low	Component Extension 7.1.1: - Bugfix: Fixed an issue where the 'Notification Popup' was partially hidden. - Bugfix: Fixed an issue in the 'Multiple Selection Field' Screen Component where the 'Title' label in mobile view was not evaluated correctly and was not truncated if too long. - Bugfix: Fixed an issue where special characters in List Entries were displayed as HTML code. - Bugfix: Fixed an issue in the 'Anchor Bar' Screen Component where the 'Entry Type' property was initialized as null even if set to 'Anchor Targets'. - Bugfix: Fixed an issue in the 'Filter Tray' Screen Component where the default 'Style' Business Object was not displayed properly. - Bugfix: Fixed an issue where the 'Filter Tray' Screen Component overflowed inside a 'Layout Container' when it did not fit the screen in Internet Explorer 11. - Bugfix: Adaptive Flow Layout: When the 'Group Title' layout option of an 'Adaptive Flow Layout' Screen Component was left empty, the screen displayed the text 'Undefined' as a title in Internet Explorer 11. The behavior has been corrected to display no text instead. - Bugfix: Fixed an issue where the 'Tree View' Screen Component did not display any data.
Extension	Low	DataAuditTrail Extension 3.3.1: - Bugfix: Added missing metadata to the 'DataAuditChange' Data Class. It is now again possible to store the 'DataAuditChange' Data Class using the DataStore extension.
Extension	Low	ScriptExecutionJob Extension 2.0.4: - Bugfix: Fixed an issue where the extension was not scheduling as expected, meaning that just one node executed a script task.
