Remarks

```
This document contains the Release Notes with changes since version 7.0.3.

Upgrade note for users of Appway 7.0 / 7.0.1 / 7.0.2 / 7.0.3:
- We recommend upgrading to 7.0.4 as soon as possible, as it contains several important
bugfixes.

For details on upgrading to Appway 7, see the article: 'System Upgrade: 6.3 to 7.0' at:
https://community.appway.com/screen/kb/article/system-upgrade-6-3-to-7-0

For documentation of new and existing features, see the Appway Knowledge Base at:
https://community.appway.com/screen/kb

For information on Known Issues in Appway 7, see:
https://community.appway.com/screen/kb/article/appway-7-known-issues

For information on deprecated and removed features in Appway 7, see:
https://community.appway.com/screen/support/news/feature-removal-and-deprecation-planned-with-
appway-7-0
```

Appway Platform (Core)

Change

Area	Importance	Description
Packages	Low	Added a new error message for cases where an Entry Point with the latest committed filter does not exist.
Packages	Low	In the sidebar displayed when a Package is selected, the Entry Point can now be triggered with a single click.

Bugfix

Area	Importance	Description
Case Template Editor	Low	The text no longer overlaps if the name of a Control or Variable binding is very long.
Custom Lists	Low	Fixed an error which occurred when setting metadata for Custom Lists.
Data Entity Comparison	High	DataEntity.ref is no longer part of the computation of equals() and hashCode(). As a result, equals() and hashCode() again function as value comparisons and the semantics used in Appway 6.3 for data entity comparisons are restored.
Process Editor	Low	Fixed an error which occurred when you selected 'None' in the 'Test Data' field and then clicked on the 'Start Process' button to run the Process.
Screen Editor	Low	When using a Password Field component in a Screen, the browser no longer autocompletes other fields with the username which was saved for Appway.
Style Business Object	Low	The status icon is now correctly updated when a change is made.
Users/Groups	Medium	Fixed an issue where some users were not added to groups correctly, when these groups were associated with swimlanes and created dynamically.
Value Store Splitting	High	It is now ensured that data objects are resolved in all cases before comparing them using equals() and hashCode(). This guarantees that comparing data objects returns correct results when Value Store Splitting is enabled.
Value Store Splitting	High	Non-US-ASCII characters in DataEntity values are now handled correctly when Value Store Splitting is enabled.
Workspace Library Builder	Medium	When minification is active and a resource cannot be minified, it is now added to the concatenated resource file without modifications to avoid errors.

Appway Extensions

Feature

Area	Importance	Description
Extension	Low	IntegrationLinkComponents Extension 1.4.2:

		- Feature: ActiveMQNotifier: Added the 'JMS Message Type' property which allows to force the use of a specific javax.jms.Message implementation for sending JMS messages to queues or topics. Possible values are 'Text' or 'Bytes'.

Change

Area	Importance	Description

Extension	Low	Component Extension 7.0.3:
		
		- Change: Workspace: Style: Updated some of the default values for 'Style' Business Objects. These new default values only take effect for new installations. If you are upgrading to 7.0.4 from an existing older 7.0.x installation, the default values available when you first installed are persisted. This behavior ensures existing solutions are not affected by this change when upgrading.
		
		- Bugfix: Screen Components: You can again set labels that contain the HTML tags
		, < b>, and for the following Screen Components:
		  - Checkbox
		  - CheckboxList
		  - Radiobutton
		  - RadiobuttonList
		  - InfoBox
		
		- Bugfix: Adaptive Flow Layout: When using one of the following Screen Components together with an Adaptive Flow Layout and an Info Box, the positioning is now correct regardless of if legacy styles or 'Style' Business Objects are applied:
		  - Text Field
		  - Password Field
		  - Date Picker
		  - Date Picker [Legacy]
		  - Text Field with Suggestions
		  - Text Field with Rich HTML Suggestions
		  - Dropdown List
		  - Dropdown List [Legacy]
		  - Text Area
		  - Checkbox
